ELISA Use at an assay dependent concentration.
Titre using peptide based assay was 1/12500.

WB Use a concentration of 0.25 µg/ml. Detects a band of approximately 70 kDa (predicted molecular weight: 72 kDa). Good results were obtained when blocked with 5% non-fat dry milk in 0.05% PBS-T.

靶标

相关性 The gamma-aminobutyric acid (GABA) A receptor is a multisubunit chloride channel that mediates the fastest inhibitory synaptic transmission in the central nervous system. This gene encodes GABA A receptor, theta subunit. GABRQ gene is mapped to chromosome Xq28 in a cluster including the genes encoding the alpha 3 and epsilon subunits of the same receptor. This gene location is also the candidate region of 2 different neurologic diseases: early-onset parkinsonism (Waisman syndrome) and X linked mental retardation (MRX3).
