靶标

相关性 The hydroxyoctadecadienoic acid (HODE) derivatives of linoleic acid, 9(R)-HODE, 9(S)-HODE and 13(S)-HODE, are the most widely distributed of the known linoleic acid metabolites. These compounds exhibit interesting biologic activities, including the regulation of platelet function, maintenance of vascular thromboresistance and transduction of the cellular responses to certain growth factors. HODE derivatives may also influence certain pathological states including, psoriasis, the development of atherosclerosis and the development of cancer. 13-S-Hydroxyoctadecadienoic acid (13-S-HODE) is the product of 15 lipoxygenase (15 LOX) metabolism of linoleic acid. It is thought to enhance cellular mitogenic response to some growth factors.
