常规信息

功能 Transcriptional activatory factor. May play a role in the control of cell proliferation.  
 组织特异性 Expressed in thymus, testis, small intestine, colon followed by ovary. Appears to be expressed only in adult organs containing proliferating/cycling cells or in response to growth factors. Also expressed in epithelial cell lines derived from tumors. Not expressed in resting cells. Isoform 2 is highly expressed in testis.  
 序列相似性 Contains 1 fork-head DNA-binding domain.  
 发展阶段 Embryonic expression pattern: liver, lung, intestine, kidney, urinary tract; adult expression pattern: intestine, colon, testis and thymus.  
 结构域 Within the protein there is a domain which acts as a transcriptional activator. Insertion of a splicing sequence within it inactivates this transcriptional activity, as it is the case for isoform 4.

翻译后修饰 Phosphorylated in M (mitotic) phase.

细胞定位 Nucleus.
