## 靶标

**相关性** LH39 is a monoclonal antibody recognizing and epitope at the lamina lucida of mature small veins and capillaries. LH39 precipitated a polypeptide with a molecular weight of 185 kD from extracts of metabolically labelled cultured keratinocytes, and polypeptides of 185 and 200 kD from the culture medium. LH39 is potentially useful in the study of benign and malignant human vascular disorders, diseases and tumours. Associated with angiogenesis, epithelial neoplasms, and conditions of tissue regeneration and repair, such as wound healing.
