

Product datasheet

Recombinant Human BAIAP2 protein ab119452

1 图像

概述

产品名称	Recombinant人BAIAP2 protein
蛋白长度	Full length protein

描述

性质	Recombinant
来源	Escherichia coli

氨基酸序列

Accession [Q9UQB8](#)

种属 Human

序列  
 MSLSRSEEMH RLTENVYKTI MEQFNPSLRN  
 FIAMGKNYEK ALAGVTYAAK GYFDALVKMG

 MSSGSGTLVS TVVEHHHHHH

分子量 58 kDa including tags

氨基酸 1 to 522

标签 His tag C-Terminus

技术指标

Our [Abpromise guarantee](#) covers the use of **ab119452** in the following tested applications.

The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.

<b>应用</b>	SDS-PAGE
<b>纯度</b>	> 90 % SDS-PAGE. ab119452 was purified using conventional chromatography techniques.
<b>形式</b>	Liquid

---

#### 制备和贮存

<b>稳定性和存储</b>	Shipped at 4°C. Store at +4°C short term (1-2 weeks). Upon delivery aliquot. Store at -20°C or -80°C. Avoid freeze / thaw cycle.  pH: 8.00 Constituents: 30% Glycerol, 0.32% Tris HCl, 0.02% DTT, 0.58% Sodium chloride
---------------	--

---

#### 常规信息

<b>功能</b>	Adapter protein that links membrane-bound small G-proteins to cytoplasmic effector proteins. Necessary for CDC42-mediated reorganization of the actin cytoskeleton and for RAC1-mediated membrane ruffling. Involved in the regulation of the actin cytoskeleton by WASF family members and the Arp2/3 complex. Plays a role in neurite growth. Acts synergetically with ENAH to promote filopodia formation.
<b>组织特异性</b>	Isoform 1 and isoform 4 are expressed almost exclusively in brain. Isoform 4 is barely detectable in placenta, prostate and testis. A short isoform is ubiquitous, with the highest expression in liver, prostate, testis and placenta.
<b>序列相似性</b>	Contains 1 IMD (IRSp53/MIM homology) domain. Contains 1 SH3 domain.
<b>结构域</b>	The IMD domain forms a coiled coil. The isolated domain can induce actin bundling and filopodia formation. In the absence of G-proteins intramolecular interaction between the IMD and the SH3 domain gives rise to an auto-inhibited state of the protein. Interaction of the IMD with RAC1 or CDC42 leads to activation. The SH3 domain interacts with ATN1, BAI1, WASF1, WASF2, SHANK1, DIAPH1 and ENAH.
<b>翻译后修饰</b>	Phosphorylated on tyrosine residues by INSR in response to insulin treatment.
<b>细胞定位</b>	Cytoplasm. Membrane. Cell projection > filopodium. Cell projection > ruffle. Detected throughout the cytoplasm in the absence of specific binding partners. Detected in filopodia and close to membrane ruffles.

### Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <http://www.abcam.cn/abpromise> or contact our technical team.

### Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
