相关性

Streptococcus pneumoniae, or pneumococcus, is a Gram positive, alpha hemolytic diplococcus aerotolerant anaerobe and a member of the genus *Streptococcus*. A significant human pathogenic bacterium, *S. pneumoniae* was recognized as a major cause of pneumonia in the late 19th century. Despite the name, the organism causes many types of pneumococcal infection other than pneumonia, including acute sinusitis, otitis media, and meningitis. *S. pneumoniae* is the most common cause of bacterial meningitis in adults and children, and is one of the top two isolates found in ear infection, otitis media. Pneumococcal pneumonia is more common in the very young and the very old. *S. pneumoniae* is serotyped based on the antigenicity of the capsular polysaccharide.
