靶标

相关性 PIGT is an essential component of the multisubunit enzyme, GPI transamidase and is involved in glycosylphosphatidylinositol (GPI)-anchor biosynthesis. The GPI-anchor is a glycolipid found on many blood cells which serves to anchor proteins to the cell surface. GPI transamidase mediates GPI anchoring in the endoplasmic reticulum, by catalyzing the transfer of fully assembled GPI units to proteins.

细胞定位 Endoplasmic reticulum membrane; Single-pass type I membrane protein.
