#### 靶标

功能 E1-like activating enzyme involved in the 2 ubiquitin-like systems required for cytoplasm to

vacuole transport (Cvt) and autophagy. Activates ATG12 for its conjugation with ATG5 as well as the ATG8 family proteins for their conjugation with phosphatidylethanolamine. Both systems are needed for the ATG8 association to Cvt vesicles and autophagosomes membranes. Required for autophagic death induced by caspase-8 inhibition. Required for mitophagy which contributes to regulate mitochondrial quantity and quality by eliminating the mitochondria to a basal level to fulfill cellular energy requirements and preventing excess ROS production. Modulates p53/TP53 activity to regulate cell cycle and survival during metabolic stress. Plays also a key role in the maintenance of axonal homeostasis, the prevention of axonal degeneration, the maintenance of hematopoietic stem cells, the formation of Paneth cell granules, as well as in adipose

differentiation.

组织特异性 Widely expressed, especially in kidney, liver, lymph nodes and bone marrow.

序列相似性 Belongs to the ATG7 family.

结**构域** The C-terminal part of the protein is essential for the dimerization and interaction with ATG3 and

ATG12.

The N-terminal FAP motif (residues 15 to 17) is essential for the formation of the ATG89-PE and

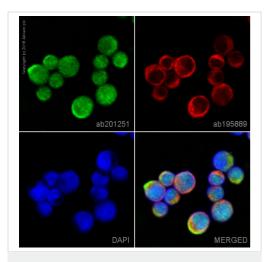

ATG5-ATG12 conjugates.

翻译后修饰 Acetylated by EP300.

细胞定位 Cytoplasm. Preautophagosomal structure. Localizes also to discrete punctae along the ciliary

axoneme and to the base of the ciliary axoneme.

Immunocytochemistry/ Immunofluorescence - Alexa Fluor® 488 Anti-ATG7 antibody [EP1759Y] (ab201251)

ab201251 staining Apg7 in Jurkat cells. The cells were fixed with 80% methanol (5 min), permeabilized with 0.1% Triton X-100 for 5 minutes and then blocked with 1% BSA/10% normal goat serum/0.3M glycine in 0.1% PBS-Tween for 1h. The cells were then incubated overnight at +4°C with ab201251 at 1/100 dilution (shown in green) and <a href="mailto:ab195889">ab195889</a>, Mouse monoclonal to alpha Tubulin (Alexa Fluor<sup>®</sup> 594), at 1/250 dilution (shown in red). Nuclear DNA was labelled with DAPI (shown in blue).

Image was taken with a confocal microscope (Leica-Microsystems, TCS SP8).

This product also gave a positive signal under the same testing conditions in Jurkat cells fixed with 4% formaldehyde (10 min).
