免疫原 Synthetic peptide. This information is proprietary to Abcam and/or its suppliers.

阳性对照 Jurkat whole cell lysate (ab7899) can be used as a positive control in WB.

常规说明 ab199099 is the carrier-free version of ab32370.

> Our carrier-free antibodies are typically supplied in a PBS-only formulation, purified and free of BSA, sodium azide and glycerol. The carrier-free buffer and high concentration allow for increased conjugation efficiency.

This conjugation-ready format is designed for use with fluorochromes, metal isotopes, oligonucleotides, and enzymes, which makes them ideal for antibody labelling, functional and cellbased assays, flow-based assays (e.g. mass cytometry) and Multiplex Imaging applications.

Use our **conjugation kits** for antibody conjugates that are ready-to-use in as little as 20 minutes with <1 minute hands-on-time and 100% antibody recovery: available for fluorescent dyes, HRP, biotin and gold.

This product is compatible with the Maxpar® Antibody Labeling Kit from Fluidigm, without the need for antibody preparation. Maxpar[®] is a trademark of Fluidigm Canada Inc.

This product is a recombinant monoclonal antibody, which offers several advantages including:

- High batch-to-batch consistency and reproducibility
- Improved sensitivity and specificity
- Long-term security of supply
- Animal-free production

应用	Ab评论	说 明
Flow Cyt (Intra)		Use at an assay dependent concentration. ab199376 - Rabbit monoclonal lgG, is suitable for use as an isotype control with this antibody.
ICC/IF		Use at an assay dependent concentration.
IP		Use at an assay dependent concentration.
IHC-P		Use at an assay dependent concentration. Perform heat mediated antigen retrieval with Tris/EDTA buffer pH 9.0 before commencing with IHC staining protocol. See IHC antigen retrieval protocols.
WB		Use at an assay dependent concentration. Predicted molecular weight: 26 kDa. Please check the parent abID, ab32370 , for more information on dilutions.

功能 Potent inhibitor of cell death. Inhibits activation of caspases (By similarity). Appears to regulate

cell death by blocking the voltage-dependent anion channnel (VDAC) by binding to it and preventing the release of the caspase activator, CYC1, from the mitochondrial membrane.

Isoform Bcl-X(S) promotes apoptosis.

组织特异性 Bcl-X(S) is expressed at high levels in cells that undergo a high rate of turnover, such as

developing lymphocytes. In contrast, Bcl-X(L) is found in tissues containing long-lived postmitotic

cells, such as adult brain.

序列相似性 Belongs to the Bcl-2 family.

结构域 The BH4 motif is required for anti-apoptotic activity. The BH1 and BH2 motifs are required for

both heterodimerization with other Bcl-2 family members and for repression of cell death.

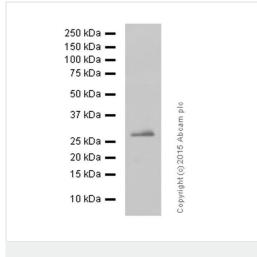

翻译后修饰 Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 motif,

has pro-apoptotic activity.

细胞定位 Mitochondrion membrane. Nucleus membrane. Mitochondrial membranes and perinuclear

envelope.
