WB		1/1000 - 1/10000. Predicted molecular weight: 22 kDa.

应用说明 Is unsuitable for Flow Cyt,ICC/IF,IHC-P or IP.

靶标

功能 The major proteolytic product p15 BID allows the release of cytochrome c (By similarity). Isoform

1, isoform 2 and isoform 4 induce ICE-like proteases and apoptosis. Isoform 3 does not induce

apoptosis. Counters the protective effect of Bcl-2.

组织特异性 lsoform 2 and isoform 3 are expressed in spleen, bone marrow, cerebral and cerebellar cortex.

lsoform 2 is expressed in spleen, pancreas and placenta (at protein level). Isoform 3 is expressed in lung, pancreas and spleen (at protein level). Isoform 4 is expressed in lung and pancreas (at

protein level).

结**构域** Intact BH3 motif is required by BIK, BID, BAK, BAD and BAX for their pro-apoptotic activity and

for their interaction with anti-apoptotic members of the Bcl-2 family.

翻译后修饰 TNF-alpha induces a caspase-mediated cleavage of p22 BID into a major p15 and minor p13

and p11 products.

Phosphorylated upon DNA damage, probably by ATM or ATR.

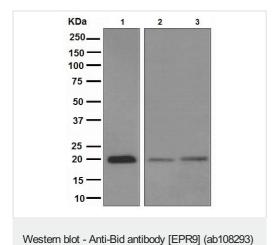

p15 BID is ubiquitinated by ITCH; ubiquitination results in proteasome-dependent degradation.

细胞定位 Cytoplasm; Cytoplasm. Mitochondrion membrane. When uncleaved, it is predominantly

cytoplasmic; Mitochondrion membrane. A significant proportion of isoform 2 localizes to mitochondria, it may be cleaved constitutively; Mitochondrion membrane. Associated with the mitochondrial membrane and Mitochondrion membrane. Translocates to mitochondria as an

integral membrane protein.
