WB		1/500 - 1/2000. Predicted molecular weight: 130 kDa.

靶标

功能	E3 ubiquitin-protein ligase that mediates ubiquitination of Delta receptors, which act as ligands of Notch proteins. Positively regulates the Delta-mediated Notch signaling by ubiquitinating the intracellular domain of Delta, leading to endocytosis of Delta receptors. Probably mediates ubiquitination and subsequent proteasomal degradation of DAPK1, thereby antagonizing anti-apoptotic effects of DAPK1 to promote TNF-induced apoptosis.
组织特异性	Widely expressed at low level. Expressed at higher level in spinal cord, ovary, whole brain, and all specific brain regions examined.
通路	Protein modification; protein ubiquitination.
序列相似性	Contains 9 ANK repeats. Contains 2 MIB/HERC2 domains. Contains 3 RING-type zinc fingers. Contains 1 ZZ-type zinc finger.
翻译后修饰	Ubiquitinated. Possibly via autoubiquitination.
细胞定位	Cytoplasm. Cell membrane. Localizes to the plasma membrane (By similarity). According to PubMed:15048887, it is mitochondrial, however such localization remains unclear.
