Our Abpromise guarantee covers the use of ab89013 in the following tested applications.	
The application notes include recommended starting dilutions; optimal dilutions/concentrations should be determined by the end user.	
应用	Functional Studies
	SDS-PAGE
形式	Lyophilized
制备和贮存	
稳定性和存储	Shipped at 4°C. After reconstitution store at -20°C. Avoid freeze / thaw cycles.
	Constituents: 1% Human serum albumin, 10% Trehalose
	This product is an active protein and may elicit a biological response in vivo, handle with caution.
复溶	It is recommended that 0.5 ml of sterile phosphate-buffered saline be added to the vial. Following reconstitution short-term storage at 4°C is recommended, and longer-term storage of aliquots at -18 to -20°C. Repeated freeze thawing is not recommended.
常规信息	
功能	Cytokine that can act as a growth factor for activated T and NK cells, enhance the lytic activity of NK/lymphokine-activated Killer cells, and stimulate the production of IFN-gamma by resting PBMC.
序列相似性	Belongs to the IL-6 superfamily.
细胞定位	Secreted.

图 片

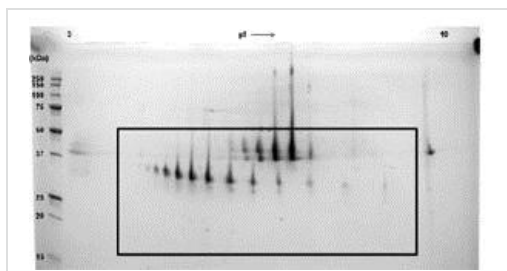

1D SDS-PAGE of ab89013 before and after treatment with glycosidases to remove oligosaccharides.

Lane 1: ab89013

Lane 2: ab89013 treated with PNGase F to remove potential N-linked glycans

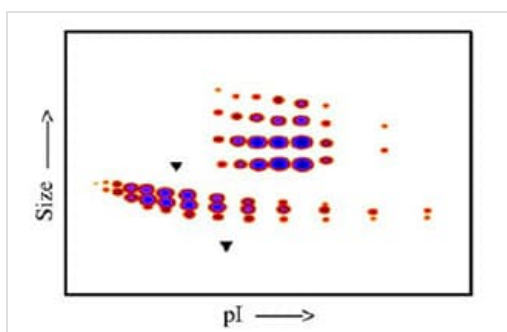

Lane 3: ab89013 treated with a glycosidase cocktail to remove potential N- and O-linked glycans.

Appearance of additional band at lower MWt after treatment with PNGase F indicates the presence of N-linked glycans. The subsequent drop in MWt after treatment with a glycosidase cocktail indicates the presence of O-linked glycans. Additional high MWt bands in lane 3 are glycosidase enzymes.

SDS-PAGE - Recombinant human IL-12 protein
(ab89013)

A sample of ab89013 without carrier protein was reduced and alkylated and focused on a 3-10 IPG strip then run on a 4-20% Tris-HCl 2D gel. 40 µg of protein was loaded. Spot trains indicate presence of multiple isoforms.

Functional Studies - Recombinant human IL-12
protein (ab89013)

Densitometry of protein isoforms visualised by 2-DE.

The densitometry scan demonstrates the purified human cell expressed protein exists in multiple isoforms, which differ according to their level of post-translational modification.

The triangles indicate theoretical pI and MWt of the alpha and beta chains of the protein.
