常规信息

功能 Destroys radicals which are normally produced within the cells and which are toxic to biological

systems.

疾病相关 Defects in SOD1 are the cause of amyotrophic lateral sclerosis type 1 (ALS1) [MIM:105400].

ALS1 is a familial form of amyotrophic lateral sclerosis, a neurodegenerative disorder affecting

upper and lower motor neurons and resulting in fatal paralysis. Sensory abnormalities are absent.

1

Death usually occurs within 2 to 5 years. The etiology of amyotrophic lateral sclerosis is likely to be multifactorial, involving both genetic and environmental factors. The disease is inherited in 5-10% of cases leading to familial forms.

序列相似性 Belongs to the Cu-Zn superoxide dismutase family.

翻译后修饰 Unlike wild-type protein, the pathogenic variants ALS1 Arg-38, Arg-47, Arg-86 and Ala-94 are

polyubiquitinated by RNF19A leading to their proteasomal degradation. The pathogenic variants

ALS1 Arg-86 and Ala-94 are ubiquitinated by MARCH5 leading to their proteasomal

degradation.

The ditryptophan cross-link at Trp-33 is reponsible for the non-disulfide-linked homodimerization. Such modification might only occur in extreme conditions and additional experimental evidence is

required.

细胞定位 Cytoplasm. The pathogenic variants ALS1 Arg-86 and Ala-94 gradually aggregates and

accumulates in mitochondria.
