靶标

相关性 Hepatitis B virus (HBV) is a human pathogen, causing serious liver disease. The HBV surface protein antigens (HBsAg) are comprised of three carboxyl co terminal HBs proteins termed large (LHBs), middle (MHBs) and small (SHBs, also called major) protein. LHBs and MHBs also share the highly hydrophobic, repetitive, membrane spanning S domain. In addition, MHBs has a 55 amino acid region called preS2.

ab30923 staining HBV PreS2 in Human hepatoma cell by ICC/IF (Immunocytochemistry/immunofluorescence). Cells were fixed with paraformaldehyde, permeabilized with 0.2% Triton X-100 and blocked with 1% milk for 30 minutes at room temperature. Samples were incubated with primary antibody (1/250 in 1% milk) for 30 minutes. An Alexa Fluor® 488-conjugated Goat anti-mouse IgG polyclonal (1/400) was used as the secondary antibody.
