Cathepsin L Activity Assay Kit (Fluorometric) ab65306

★★★★★ 1 Abreviews 44 References 3 图像

概述

产品名称 Cathepsin L Activity Assay试剂盒(Fluorometric)

检测方法 Fluorescent

样**品**类型 Serum, Plasma, Cell Lysate, Tissue Lysate

检测类型 Enzyme activity

检测时间 2h 00m

种属反应性 与反应: Mammals, Other species

产品概述 Abcam's Cathepsin L Activity Assay Kit is a fluorescence-based assay that utilizes the preferred

cathepsin-L substrate sequence FR labeled with AFC (amino-4-trifluoromethyl coumarin). Cell lysates or other samples that contain cathepsin L will cleave the synthetic substrate FR-AFC to release free AFC, which can be measured in a spectrophotometer at Em = 505 nm. The amount

of free AFC will be directly proportional to the cathepsin L activity found in the sample.

Visit our **FAQs page** for tips and troubleshooting.

说明 This product is manufactured by BioVision, an Abcam company and was previously called K142

Cathepsin L Activity Fluorometric Assay Kit. K142-100 is the same size as the 100 test size of

ab65306.

Cathepsin L plays a major role in antigen processing, tumor invasion and metastasis, bone resorption, and turnover of intracellular and secreted proteins involved in growth regulation.

Although commonly recognized as a lysosomal protease, cathepsin L is also secreted. This broad-spectrum protease is potent in degrading several extracellular proteins (laminins,

fibronectin, collagens I and IV, elastin, and other structural proteins of basement membranes) as

well as serum proteins and cytoplasmic and nuclear proteins.

平台 Microplate reader

性能

存放说明 Store at -20°C. Please refer to protocols.

组 件	100 tests
Cathepsin Inhibitor	1 x 20µl

1

组 件	100 tests
Cathepsin L Positive Control	1 vial
Cathepsin L Substrate	1 x 200µl
DTT II	1 x 100µl
Lysis Buffer VII	1 x 25ml

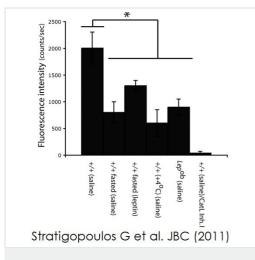

相关性

Cathepsin L is a lysosomal cysteine proteinase that plays a major role in intracellular protein catabolism. Its substrates include collagen and elastin, as well as alpha 1 protease inhibitor, a major controlling element of neutrophil elastase activity. Cathepsin L has been implicated in several pathologic processes, including rheumatoid arthritis, muscular dystrophy, Alzheimers, cancer, myofibril necrosis in myopathies and in myocardial ischemia, and in the renal tubular response to proteinuria. Cathepsin L, which is a member of the peptidase C1 family, is a dimer composed of disulfide linked heavy and light chains, both produced from a single protein precursor. At least two transcript variants encoding the same protein have been found for its gene.

Our Abpromise to you: Quality guaranteed and expert technical support

- · Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours

- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.cn/abpromise or contact our technical team.

Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
