

7-Chlorokynurenic acid sodium salt, NMDA receptor glycine site antagonist ab120255

3 References **2 图像**

概述

产品名称	7-Chlorokynurenic acid sodium salt, NMDA receptor glycine site拮抗剂
描述	NMDA receptor glycine site拮抗剂; water soluble
生物学描述	Potent NMDA receptor glycine site antagonist. Water soluble form.
	Also available in simple stock solutions (ab146692) - add 1 ml of water to get an exact, ready-to-use concentration.
纯度	> 99%
CAS编号	1263094-00-3
化学结构	

性能

化学名称	7-Chloro-4-hydroxyquinoline-2-carboxylic acid sodium salt
分子量	245.60
PubChem识别号	52974249
存放说明	Store at Room Temperature. Store under desiccating conditions. The product can be stored for up to 12 months.
溶解度概述	Soluble in water to 100 mM
处理	<p>Wherever possible, you should prepare and use solutions on the same day. However, if you need to make up stock solutions in advance, we recommend that you store the solution as aliquots in tightly sealed vials at -20°C. Generally, these will be useable for up to one month. Before use, and prior to opening the vial we recommend that you allow your product to equilibrate to room temperature for at least 1 hour.</p> <p>Need more advice on solubility, usage and handling? Please visit our frequently asked questions (FAQ) page for more details.</p>
SMILES	<chem>O=C(O[Na])c1cc(O)c2ccc(Cl)cc2n1</chem>

2D chemical structure image of ab120255, 7-Chlorokynurenic acid sodium salt, NMDA receptor glycine site antagonist

ab12416 staining cGMP in SKNSH cells treated with 7-Chlorokynurenic acid sodium salt (ab120255), by ICC/IF. Decrease in cGMP expression correlates with increased concentration of 7-Chlorokynurenic acid sodium salt, as described in literature. The cells were incubated at 37°C for 30 minutes in media containing different concentrations of ab120255 (7-Chlorokynurenic acid sodium salt) in DMSO. Some samples were then further incubated with 1 mM glutamate (**ab120049**) for 15 minutes and all samples were fixed with 100% methanol for 5 minutes at -20°C and blocked with PBS containing 10% goat serum, 0.3 M glycine, 1% BSA and 0.1% tween for 2h at room temperature. Staining of the treated cells with **ab12416** (5 μ g/ml) was performed overnight at 4°C in PBS containing 1% BSA and 0.1% tween. A DyLight 488 anti-rabbit polyclonal antibody (**ab96899**) at 1/250 dilution was used as the secondary antibody. Nuclei were counterstained with DAPI and

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <https://www.abcam.cn/abpromise> or contact our technical team.

Terms and conditions

- Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
- Abcam biochemicals are novel compounds and we have not tested their biological activity in house. Please use the literature to identify how to use these products effectively. If you require further assistance please contact the scientific support team
