## Product datasheet

## Anti-Adenovirus antibody ab36851

### **6 References**

#### 概述

产品名称 Anti-Adenovirus抗体

描述 山羊多克隆抗体to Adenovirus

**宿主** Goat

经测试应用 适用于: ELISA, WB, ICC/IF

种属反应性 与反应: Adenovirus

免疫原 Tissue, cells or virus corresponding to Adenovirus. Disrupted type 5 virions.

常规说明

#### 相关性

Adenoviruses are DNA viruses generally widespread in nature that are frequently the cause of acute upper respiratory tract infections (i.e. common colds). Forty-seven known serotypes have been isolated since they were first discovered in 1953 with 3 types known to cause gastroenteritis. Several types have oncogenic potential though most cause self-limiting febrile illnesses characterised by inflammation of conjunctivae and the respiratory tract. The virus can be isolated from the majority of tonsils/adenoids surgically removed, indicating latent infections. It is not known how long the virus can persist in the body, or whether it is capable of reactivation after long periods. In patients experiencing immunosuppression (e.g. AIDS) it can be reactivated causing disease.
