靶标

功能	May be involved in the sorting of secreted proteins (By similarity). May be involved in pre-B-cell growth. Antiretroviral defense protein, that blocks release of retrovirus from the cell surface. Depleted upon HIV-1 infection by viral VPU protein through 20S proteasome degradation. Depleted upon infection by human Kaposi's sarcoma-associated herpesvirus (KSHV) through ubiquitination and subsequent degradation. May play a role in B-cell activation in rheumatoid arthritis.
组织特异性	Predominantly expressed in liver, lung, heart and placenta. Lower levels in pancreas, kidney, skeletal muscle and brain. Overexpressed in multiple myeloma cells. Highly expressed during B-cell development, from pro-B precursors to plasma cells. Highly expressed on T-cells, monocytes, NK cells and dendritic cells (at protein level).
序列相似性	Belongs to the tetherin family.
结构域	The extracellular coiled coil domain is important for virus retention at the cell surface and prevention of virus spreading.
翻译后修饰	Monoubiquitinated by KSHV E3 ubiquitin-protein ligase K5, leading to its targeting to late endosomes and degradation.
细胞定位	Golgi apparatus > trans-Golgi network. Cell membrane. Cell membrane. Late endosome. Targeted to late endosomes upon KSHV infection and subsequent ubiquitination. Targeted to the trans-Golgi network by viral VPU protein.

Flow cytometry staining of C57 BL/6 mouse splenocytes with ab275192 (right) or Rabbit IgG (monoclonal) Alexa Fluor® 488 (**ab199091**) isotype control (left). Cells were incubated for 30 min on ice in 1x PBS containing 10 µ/ml anti-CD16/CD32 and 10% normal goat serum to block FC receptors and non-specific protein-protein interaction followed by the antibody (ab275192) or Rabbit IgG (monoclonal) Alexa Fluor 488® (**ab199091**) isotype (1 x 10⁶ in 100 µl at 1µg/ml (1/500)) for 30 min on ice. The cells were simultaneously stained with CD45R. Acquisition of >30000 events were collected using a 50 mW Blue laser (488nm) and 530/30 bandpass filter. Events were gated on live single cells.
