靶标

相关性	The bacterial pathogen <i>Staphylococcus aureus</i> is insensitive to antimicrobial host defense peptides like defensins, protegrins, platelet microbicidal proteins and bacteriocins. <i>Staphylococci</i> have developed various resistance mechanisms including those specific for bacteriocins and several host defence peptides. A protein belonging to the resistance mechanism of <i>Staphylococcus aureus</i> is known as CHIPS (Chemotaxis Inhibiting Protein for <i>Staphylococcus aureus</i>). CHIPS is a proteins that inhibits chemotaxis of neutrophils by blocking the Formyl Peptide Receptor (FPR) and C5a Receptor on neutrophils.
细胞定位	Secreted
