Anti-E Cadherin antibody [M168] - C-terminal ab76055

★★★★★ 17 Abreviews 370 References 5 图像

概述

产品名称 Anti-E Cadherin抗体[M168] - C-terminal

宿主 Mouse

特异性 ab76055 does not cross react with VE Cadherin or N Cadherin.

经测试应用 适用于: IHC-P, Flow Cyt (Intra), ICC, WB

种属反应性 与反应: Human

免疫原 Recombinant fragment corresponding to Mouse E Cadherin (C terminal).

阳性对照 WB: Human A431 cell lysate; IHC-P: Human colon tissue; ICC: A431 cells. Flow Cyt (intra): A431

cells

常规说明

The Life Science industry has been in the grips of a reproducibility crisis for a number of years.

Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets

your needs before purchasing.

If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. Recommended alternatives for this product can be

found below, along with publications, customer reviews and Q&As

性能

形式 Liqui

存放说明 Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

存储溶液 Preservative: 0.05% Sodium azide

Constituents: 0.1% BSA, 50% Glycerol, PBS

纯**度** Protein A purified

 克隆
 单克隆

 克隆编号
 M168

 同种型
 IgG1

轻链类型 kappa

The Abpromise guarantee

Abpromise™承诺保证使用ab76055于以下的经测试应用

"应用说明"部分下显示的仅为推荐的起始稀释度;实际最佳的稀释度/浓度应由使用者检定。

应用	Ab评论	说明
IHC-P	★★★★★(8)	Use a concentration of 5 μ g/ml. Perform heat mediated antigen retrieval with citrate buffer pH 6 before commencing with IHC staining protocol.
Flow Cyt (Intra)		1/100. ab170190 - Mouse monoclonal lgG1, is suitable for use as an isotype control with this antibody.
ICC		Use at an assay dependent concentration.
WB	★★★★ <u>(4)</u>	1/100 - 1/1000. Predicted molecular weight: 97 kDa.

靶标

功能

Cadherins are calcium-dependent cell adhesion proteins. They preferentially interact with themselves in a homophilic manner in connecting cells; cadherins may thus contribute to the sorting of heterogeneous cell types. CDH1 is involved in mechanisms regulating cell-cell adhesions, mobility and proliferation of epithelial cells. Has a potent invasive suppressor role. It is a ligand for integrin alpha-E/beta-7.

E-Cad/CTF2 promotes non-amyloidogenic degradation of Abeta precursors. Has a strong inhibitory effect on APP C99 and C83 production.

组织**特异性**

疾病相关

Non-neural epithelial tissues.

Defects in CDH1 are the cause of hereditary diffuse gastric cancer (HDGC) [MIM:137215]. An autosomal dominant cancer predisposition syndrome with increased susceptibility to diffuse gastric cancer. Diffuse gastric cancer is a malignant disease characterized by poorly differentiated infiltrating lesions resulting in thickening of the stomach. Malignant tumors start in the stomach, can spread to the esophagus or the small intestine, and can extend through the stomach wall to nearby lymph nodes and organs. It also can metastasize to other parts of the body. Note=Heterozygous germline mutations CDH1 are responsible for familial cases of diffuse gastric cancer. Somatic mutations in the has also been found in patients with sporadic diffuse gastric cancer and lobular breast cancer.

Defects in CDH1 are a cause of susceptibility to endometrial cancer (ENDMC) [MIM:608089]. Defects in CDH1 are a cause of susceptibility to ovarian cancer (OC) [MIM:167000]. Ovarian cancer common malignancy originating from ovarian tissue. Although many histologic types of ovarian neoplasms have been described, epithelial ovarian carcinoma is the most common form. Ovarian cancers are often asymptomatic and the recognized signs and symptoms, even of latestage disease, are vague. Consequently, most patients are diagnosed with advanced disease.

序列相似性

翻译后修饰

Contains 5 cadherin domains.

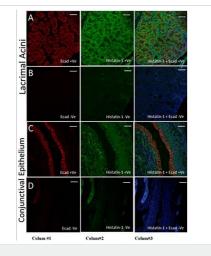

During apoptosis or with calcium influx, cleaved by a membrane-bound metalloproteinase (ADAM10), PS1/gamma-secretase and caspase-3 to produce fragments of about 38 kDa (E-CAD/CTF1), 33 kDa (E-CAD/CTF2) and 29 kDa (E-CAD/CTF3), respectively. Processing by the metalloproteinase, induced by calcium influx, causes disruption of cell-cell adhesion and the subsequent release of beta-catenin into the cytoplasm. The residual membrane-tethered

细胞定位

cleavage product is rapidly degraded via an intracellular proteolytic pathway. Cleavage by caspase-3 releases the cytoplasmic tail resulting in disintegration of the actin microfilament system. The gamma-secretase-mediated cleavage promotes disassembly of adherens junctions.

Cell junction. Cell membrane. Endosome. Golgi apparatus > trans-Golgi network. Colocalizes with DLGAP5 at sites of cell-cell contact in intestinal epithelial cells. Anchored to actin microfilaments through association with alpha-, beta- and gamma-catenin. Sequential proteolysis induced by apoptosis or calcium influx, results in translocation from sites of cell-cell contact to the cytoplasm. Colocalizes with RAB11A endosomes during its transport from the Golgi apparatus to the plasma membrane.

Immunohistochemistry staining of E Cadherin in human MMCR (Muller's muscle conjunctival resection) tissue.

Xylene and rehydration with serial ethanol dilutions were used for deparaffinization. Slides were washed twice for 5 minutes in 0.25% Triton X-100 for permeabilization and blocked for 2 hours at room temperature with 2% BSA and 10% normal donkey serum in PBS. Slides were incubated overnight at 4°C with ab76055. The next day, the slides were washed twice for 5 minutes in PBS and incubated for 1–2 hours with respective secondary antibodies diluted in blocking solution (1:200–800). Vecta shield mounting medium with 4′,6-diamidino-2-phenylindole (DAPI) was placed over the slides and covered with a glass coverslip. Slides were analyzed using the Zeiss LSM 710 Confocal Microscope.

Western blot - Anti-E Cadherin antibody [M168] - C-terminal (ab76055)

Lane 1 : Anti-E Cadherin antibody [M168] - C-terminal (ab76055) at 1/1000 dilution

Lane 2: Anti-E Cadherin antibody [M168] - C-terminal (ab76055) at 1/2000 dilution

Lane 3: Anti-E Cadherin antibody [M168] - C-terminal (ab76055) at 1/4000 dilution

All lanes : A431 (Human epidermoid carcinoma cell line) denatured whole cell lysate

Lysates/proteins at 10 µg per lane.

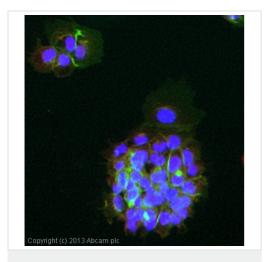

Predicted band size: 97 kDa

Exposure time: 2 minutes

Blocked and probed in the presence of 5% milk, and the image was captured using chemiluminescence and film.

ICC/IF image of ab76055 stained A431 (Human epidermoid carcinoma cell line) cells.

The cells were 4% formaldehyde fixed (10 minutes) and then incubated in 1% BSA / 10% normal goat serum / 0.3M glycine in 0.1% PBS-Tween for 1 hour to permeabilize the cells and block non-specific protein-protein interactions. The cells were then incubated with the antibody (ab76055, 1/100 dilution) overnight at +4°C. The secondary antibody (green) was <u>ab96879</u>, DyLight[®] 488 goat anti-mouse lgG (H+L) used at a 1/250 dilution for 1 hour. Alexa Fluor[®] 594 WGA was used to label plasma membranes (red) at a 1/200 dilution for 1 hour. DAPI was used to stain the cell nuclei (blue) at a concentration of 1.43 μ M.

Immunocytochemistry - Anti-E Cadherin antibody [M168] - C-terminal (ab76055)

Immunohistochemistry (Formalin/PFA-fixed paraffinembedded sections) - Anti-E Cadherin antibody

[M168] - C-terminal (ab76055)

IHC image of E Cadherin staining in human colon formalin fixed paraffin embedded tissue section, performed on a Leica BondTM system using the standard protocol F.

The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer pH 6, for 20 minutes. The section was then incubated with ab76055, 5 μ g/ml, for 15 minutes at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

Flow Cytometry (Intracellular) - Anti-E Cadherin antibody [M168] - C-terminal (ab76055)

Overlay histogram showing A431 (Human epidermoid carcinoma cell line) cells stained with ab76055 (red line).

The cells were fixed with 4% paraformaldehyde (10 minutes) and then permeabilized with 0.1% PBS-Tween for 20 minutes. The cells were then incubated in 1x PBS / 10% normal goat serum / 0.3M glycine to block non-specific protein-protein interactions followed by

the antibody (ab76055, 1/100 dilution) for 30 minutes at 22°C. The secondary antibody used was a DyLight[®] 488 goat anti-mouse lgG (H+L) **ab96879** at 1/500 dilution for 30 minutes at 22°C. Isotype control antibody (black line) was mouse lgG1 [ICIGG1] (**ab91353**, $2 \mu g/1 \times 10^6$ cells) used under the same conditions.

Acquisition of >5,000 events was performed.

This antibody gave a positive signal in A431 cells fixed with 80% methanol (5 minutes)/permeabilized with 0.1% PBS-Tween for 20 minutes used under the same conditions.

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- · Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit https://www.abcam.cn/abpromise or contact our technical team.

Terms and conditions

· Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
