# Anti-FGF 23 antibody ab56326

### <u>10 References</u> 2 图像

概述			
产品名称	Anti-FGF 23抗体		
描述	山羊多克隆抗体to FGF 23		
宿主	Goat		
经测试应 <b>用</b>	适用于: WB, ICC/IF		
<b>种属反应性</b>	与反应: Human		
免疫原	Synthetic peptide:		
	C-RHTRSAEDDSERD		
	, corresponding to internal sequence amino acids 176-188 of Human FGF 23 <b>Run BLAST with Run BLAST with</b>		
<b>阳性</b> 对照	Human Brain (Hippocampus) lysate.		
<b>常</b> 规说 <b>明</b>	The Life Science industry has been in the grips of a reproducibility crisis for a number of years. Abcam is leading the way in addressing this with our range of recombinant monoclonal antibodies and knockout edited cell lines for gold-standard validation. Please check that this product meets your needs before purchasing.		
	If you have any questions, special requirements or concerns, please send us an inquiry and/or contact our Support team ahead of purchase. Recommended alternatives for this product can be found below, along with publications, customer reviews and Q&As		
性能			
形式	Liquid		
存 <b>放</b> 说明	Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.		
存储溶液	pH: 7.30 Preservative: 0.02% Sodium azide Constituents: 0.5% BSA, Tris buffered saline		
纯 <b>度</b>	Immunogen affinity purified		
纯化说明	Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity		
	chromatography using the immunizing peptide.		
克隆	chromatography using the immunizing peptide. 多克隆		

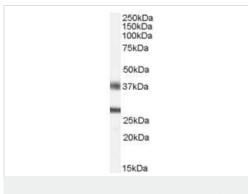

The Abpromise guarantee

#### <u>Abpromise™</u>承诺保证使用ab56326于以下的经测试应用

#### "应用说明"部分下显示的仅为推荐的起始稀释度;实际最佳的稀释度/浓度应由使用者检定。

应用	Ab评论	说明
WB		Use a concentration of 0.3 - 1 µg/ml. Detects a band of approximately 27 kDa (predicted molecular weight: 28 kDa). A 1 hour primary incubation is recommended for this product. An additional band of unknown identity was also consistently observed at 37kDa. This band was successfully blocked by incubation with the immunising peptide.
ICC/IF		Use a concentration of 1 µg/ml.

<b>靶</b> 标	
功能	Regulator of phosphate homeostasis. Inhibits renal tubular phosphate transport by reducing SLC34A1 levels. Upregulates EGR1 expression in the presence of KL (By similarity). Acts directly on the parathyroid to decrease PTH secretion (By similarity). Regulator of vitamin-D metabolism. Negatively regulates osteoblast differentiation and matrix mineralization.
组织 <b>特异性</b>	Expressed in osteogenic cells particularly during phases of active bone remodeling. In adult trabecular bone, expressed in osteocytes and flattened bone-lining cells (inactive osteoblasts).
疾病相关	Defects in FGF23 are the cause of autosomal dominant hypophosphataemic rickets (ADHR) [MIM:193100]. ADHR is characterized by low serum phosphorus concentrations, rickets, osteomalacia, leg deformities, short stature, bone pain and dental abscesses. Defects in FGF23 are a cause of hyperphosphatemic familial tumoral calcinosis (HFTC) [MIM:211900]. HFTC is a severe autosomal recessive metabolic disorder that manifests with hyperphosphatemia and massive calcium deposits in the skin and subcutaneous tissues.
序列相似性	Belongs to the heparin-binding growth factors family.
<b>翻</b> 译 <b>后修</b> 饰	Following secretion this protein is inactivated by cleavage into a N-terminal fragment and a C- terminal fragment. The processing is effected by proprotein convertases. O-glycosylated by GALT3. Glycosylation is necessary for secretion; it blocks processing by proprotein convertases when the O-glycan is alpha 2,6-sialylated. Competition between proprotein convertase cleavage and block of cleavage by O-glycosylation determines the level of secreted active FGF23.
细 <b>胞定位</b>	Secreted. Secretion is dependent on O-glycosylation.

Western blot - Anti-FGF 23 antibody (ab56326)

Anti-FGF 23 antibody (ab56326) at 0.5 µg/ml + Human Brain (Hippocampus) lysate (35µg protein in RIPA buffer)

Predicted band size: 28 kDa Observed band size: 27 kDa Additional bands at: 37 kDa. We are unsure as to the identity of these extra bands.

Immunocytochemistry/ Immunofluorescence - Anti-FGF 23 antibody (ab56326) Primary incubation was 1 hour. Detected by chemiluminescence.

ICC/IF image of ab56326 stained SHSY5Y cells. The cells were 4% formaldehyde fixed (10 min) and then incubated in 1%BSA / 10% normal donkey serum / 0.3M glycine in 0.1% PBS-Tween for 1h to permeabilise the cells and block non-specific protein-protein interactions. The cells were then incubated with the antibody (ab56326, 1µg/ml) overnight at +4°C. The secondary antibody (green) was Alexa Fluor® 488 donkey anti-goat IgG (H+L) used at a 1/1000 dilution for 1h. Alexa Fluor® 594 WGA was used to label plasma membranes (red) at a 1/200 dilution for 1h. DAPI was used to stain the cell nuclei (blue) at a concentration of  $1.43\mu$ M.

Please note: All products are "FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES"

#### Our Abpromise to you: Quality guaranteed and expert technical support

- Replacement or refund for products not performing as stated on the datasheet
- Valid for 12 months from date of delivery
- Response to your inquiry within 24 hours
- We provide support in Chinese, English, French, German, Japanese and Spanish
- Extensive multi-media technical resources to help you
- We investigate all quality concerns to ensure our products perform to the highest standards

If the product does not perform as described on this datasheet, we will offer a refund or replacement. For full details of the Abpromise, please visit <u>https://www.abcam.cn/abpromise</u> or contact our technical team.

#### Terms and conditions

• Guarantee only valid for products bought direct from Abcam or one of our authorized distributors
