种属反 应性	与反应: Human			
免疫原	Synthetic peptide corresponding to Human FOXP3 aa 400 to the C-terminus conjugated to keyhole limpet haemocyanin. Database link: <u>Q9BZS1</u> (Peptide available as <u>ab16809</u>)			
阳性 对照	IHC-P: FFPE Human tonsil tissue sections. IHC-Fr: Human tonsil tissue sections.

应用	Ab评论	说明
IHC-Fr		Use a concentration of 5 µg/ml.
IHC-P	* * * * * (1)	1/50. This clone has been tested against FOXP3 transfectants of COS- 1 cells fixed with acetone and also works against formalin-fixed paraffin-embedded FOXP3 transfectants heat retrieved with pH9 Tris-EDTA buffer.It did not show positive staining with cryostat or paraffin-embedded human tonsil.
WB		Use a concentration of 1 μ g/ml. Detects a band of approximately 48 kDa (predicted molecular weight: 48 kDa).

靶 标	
功能	Probable transcription factor. Plays a critical role in the control of immune response.
疾病相关	Defects in FOXP3 are the cause of immunodeficiency polyendocrinopathy, enteropathy, X-linked syndrome (IPEX) [MIM:304790]; also known as X-linked autoimmunity-immunodeficiency syndrome. IPEX is characterized by neonatal onset insulin-dependent diabetes mellitus, infections, secretory diarrhea, trombocytopenia, anemia and eczema. It is usually lethal in infancy.
序列相似性	Contains 1 C2H2-type zinc finger. Contains 1 fork-head DNA-binding domain.
细 胞定位	Nucleus.

Immunohistochemistry (Frozen sections) - Anti-FOXP3 antibody [mAbcam 450] (ab450) IHC image of FOXP3 staining in a section of formalin-fixed frozen normal human tonsil* performed on a Leica BONDTM system using the standard protocol F. The section was then incubated with ab450, 5ug/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.

Immunohistochemistry (Formalin/PFA-fixed paraffinembedded sections) - Anti-FOXP3 antibody [mAbcam 450] (ab450)

IHC image of FOXP3 staining in a section of formalin-fixed paraffinembedded normal human tonsil* performed on a Leica BOND[™] system using the standard protocol F. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH6, epitope retrieval solution 1) for 20mins. The section was then incubated with ab450, 1ug/ml, for 15 mins at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

For other IHC staining systems (automated and non-automated) customers should optimize variable parameters such as antigen retrieval conditions, primary antibody concentration and antibody incubation times.
